### Select Plastics Environmental Policy.

Select Plastics are committed to be Net Zero Emissions by 2050.

We believe we are the Only Australian Plastics company that is 100% committed to being Net Zero 2050.

Select Plastics want to reduce our energy emissions output by 30% by 2030, (Kg for KG of Plastic processed) and then by a further 40% by 2040 and a further 30% by 2050.

Select Plastics have already purchased our first energy saving servo machine and are committed to our Proprietary SELECT HEAT induction heating.

Select are committed to less product miles by making our products in Australia not overseas, we are committed to solar energy powering our facilities via Large onsite Solar with Battery backup as well as offsetting our Electricity against Solar produced Electricity.

Select Plastics use 100% Recycled Plastic where possible and hope to one day be the biggest user of recycled PP in Australia. We are committed to use **Australian Post-consumer** recycled PP, not **imported post-industrial** PP.

Some Materials simply can't be Recycled Materials, but we approach every project with the idea of Recycled in the front of our mind, not at the back of our minds.

Select Plastics are always on the look out for new sources of Post-Consumer PP and other materials to use in our processes.

Select Plastics don't make any single use plastic packaging and in fact we supply recycled for use in recycled plastics PET Strip.

Select Plastics recognise that it is not Plastic itself that is a pollution issue, it's the people that mis use the plastic.
